## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 6-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Houston et al. Houston et al teaches a plano-convex optical sheet (col. 15, line 58-col. 16, line 17) including a substantially planar inner surface (col. 6, lines 1-20); opposed lateral edges (shown in Fig. 12A), and a thickness  $s$  that is decreasing proceeding from a transversal central line passing through the geometric center of the optical sheet towards said opposed lateral edges along a portion of predetermined width  $w$  of the optical sheet (col. 6, lines 1-20), so as to define a convex outer surface having a curvature such that the optical sheet is capable of providing once bent (col. 5, lines 25-30) a cylindrically shaped optically correct visor (col. 11, lines 12-17; col. 11, line 60-col. 12, line 6). The maximum thickness along the transversal central line can be between 1-5 mm and the minimum thickness at the opposed lateral edges can be between 1-3 mm (col. 6, lines 1-20). The lens can be bent in a manner of heating the sheet to bend it and then cutting it (col. 5, lines 25-35). The width can be between 84-500 mm or the radius of the outer surface is between base 2 and 12 (col. 16, lines 18-65).

***Allowable Subject Matter***

Claim 5 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not teach or suggest a thickness that decreases in accordance with the recited equation.

***Conclusion***

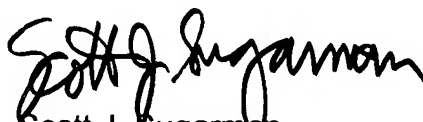

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cotie is cited to show another type of optical structure where the lens is flexed into position and having a specified power, by taking into account the pre-flex power.
